4 STEPS TO SOLAR POWER

SO JUST HOW DOES SOLAR POWER WORK, ANYWAY? WHEN YOU USE CO-OP SOLAR, IT'S PRETTY SIMPLE:

- The sun is a big power plant. It's making energy all the time, and beaming that energy at the Earth in the form of light.
- Solar panels turn light into electricity. When light hits most objects—your skin, for example—it turns into heat. But solar panels turn the light into electricity we can use—exactly like electricity from any other source.
- Co-op Solar gets you connected. The solar panels are directly connected to the same utility power grid and co-op that serves your home or business today.
- You get the benefits. You pay for your part of the solar production—which means you get green energy. As the program grows, we are committed to building more arrays, so Co-op Solar participants are contributing to a larger pool of green energy that offsets the need for fossil fuels.

Start Using Solar

Get your piece of the sun—just visit PowerMoves.com/solar, or call our office at 800-844-7161 to get started.

DISCOVER AN EASY, AFFORDABLE WAY TO PUT CLEAN SOLAR POWER TO WORK.

GET STARTED WITH SOLAR

Co-op Solar is a new solar energy program from your local electric cooperative. Unlike individual rooftop solar systems, Co-op Solar is a "community solar" system: a larger system that allows many co-op members to get the benefits of solar energy.

How it Works

Co-op Solar works by utilizing solar panels directly connected to the very same utility power grid that serves you today. That means you get the benefits of solar energy, without any onsite equipment or maintenance.

A Network of Solar Arrays

With solar arrays located in Peru, Wanatah, and Danville, Indiana, as well as Ste. Genevieve, Missouri, and Paris, Illinois, you can count on regular, dependable solar production. You benefit from our network of arrays, but never have to install a thing.

Is the Co-op Solar program a good investment?

Participating in Co-op Solar is a great way to reduce the environmental impact of your electricity usage. However, it is not intended to be an investment, and you should not subscribe for the purpose of earning profits.

HOW TO PARTICIPATE

As a member of our local electric cooperative, you are eligible to participate. Homeowners and renters alike qualify for this program, and as long as you stay within co-op territory you can even move homes without stopping service.

CO-OP SOLAR RATES

To make sure everyone can participate in Co-op Solar, we offer the following rate options:

SunLite

Pay as you go, starting at just 33 cents per block each month.

SunBlock

Lock in your rate through 2037 by paying either \$393.39 per block up front, or making payments in monthly installments of \$2.60 per block.
